EXTENDED ABSTRACT

Negative usage models, for e.g. dark web, that surround the disruptive ICT (Information and Communication Technologies) become a threat to ensure sustainable, progressive nation, society and culture. Cybercrimes, which capture such models, played vital role in misleading the Telangana youth and society in the guise of Telangana movement with the result that academic merit and leadership turned India-abusive during 2011-14 in technological education environment in Telangana. The multidimensional perspectives and significance of such cybercrimes were highlighted in nearly 20 research publications, including our earlier NAO2017 presentation, towards research-tracking the issue of cybercrimes from 360 degrees lifecycle and remedial perspectives. We endeavored to recover the academic and national losses due to these cybercrimes.

Interestingly, 3-D(Dimensions of) Government of Telangana are well-known- 1.Fake GoT(GoT2011-14) 2.GoT (2Jun2014-Sep2014)3.GoT(Sep2014-till date). Through People's Governance Forum(PGF) (<https://sites.google.com/site/sekharaiak/apeoples-governanceforumwebpage>), we brought to limelight the prevalence of the First Government of Telangana, a Fake GoT. Its Chief Minister, Council of Ministers, and Governor are anonymous. The details of the nearly 2000 registrants in the website relevant to the FGoT are not known to us. The FGoT and JNTUJAC, its affiliate organization used the website <http://jntuhjac.com> during 2011-14 cybercriminally. Earlier, through web crawler, we retrieved and captured the snapshots of the home page of the website for researchers' benefit. Thus, JNTUJAC and the FGoT are twin cybercriminal organizations which abused our national society and academics through their negative usage models of disruptive ICT. There is a police complaint (registered) against this GoT. The Fake GoT has had JNTUJAC as its functional organization online-offline(OOFGoT).

The 2nd GoT is GoT2Jun2014-Sep2014. It is an offshoot of the First GoT, a Fake GoT. It is a full-fledged GoT with wellknown Chief Minister Mr.K.Chandra Sekhar Rao, Council of Ministers and Governor Sri.ESL Narasimhan. The 3rd GoT is the caretaker GoT(Sep2014-).The former ministers became caretaker ministers. The Governor is unchanged.

3D-GoT details cybercrimes and for cyberpolicing to check India-abusive cybercrimes. Our idea is for सुरक्षित, स्वच्छ, सत्य, अंक भारत. Digital India becomes successful only when it is able to secure its people with the ability to prevent or remedy the computer/cybercrimes that abuse the nation/ its society/ its people/ culture. This means the people of the country have to be information security-intelligent in facing the usage of disruptive technologies. Further, the nation should be able to ensure that the cybercriminal organizations do not spring forth from within and are disembarked successfully easily when noticed to have a say or existence otherwise. To realize the same, our research group members formed a cybercrimes-awareness generation workforce through PGF.

Our <https://sites.google.com/site/chandrasekharaiahk/hyderabadbulbulcharminarchalchal> serves as a remedial forum to generate the people's consciousness for a cybercrime-free society. This promotes positive national psychology among the Telangana people who noticed the prevalence of India-abusive cybercrimes during 2011-14. Our work builds inclusive society by transforming the perverted cybercrime-prone community by means of knowledge sharing by webpage, website and social network. Our work adopted a legacy means to achieve Swachch digital Telangana, that is, free from India-abusive cybercrimes. The dire need of the hour is a white paper release by each of the state and central governments about the FGoT, detailing the stringent measures taken to defuse the same so that fake Governments don't tend to recur and the existing governments can gain peoples' confidence.
