

## **Industry 4.0 as a New Dimension in Human Engineering.**

*Dr Premalatha.P*, Assistant Professor , Trirumala Engineering College,Keesara,Hyderabad

**Dr P.Ramlal,HOD,SOM, NIT Warangal.**

### ***Abstract:***

India a land of rich resources of Nature-Human Brain is working with the cutting edge technology and grooming the organisations with the new term of Industry 4.0. Industry is defined as an entity with the existence of human to produce the output as work with the input of man, money, machine. Industry 4.0 is anew buzz word where all the business horizons can be narrowed with digitisation in the form of Quality, less scrap, minimized delays, zero manual error. Is Human Life sustainable only with the technology in this Era or not?. Yes, it's the most vital as with in an human an electric wiring exists in the form of Stimulus-Response from our neurotic science of Human Brain. The brain itself a machine or a device with input and outputs. Inputs are our situations and cognition with the co-ordination of physical motors generates an output. This initiated the parameter of logic, considered as Technology and utilising this with optimality speaks of Engineering. When the third wave of psychology or human behaviour Practitioners were speaking about the reduction of usage of the technological gadgets for a happy and peaceful life and the economists who are keen in strengthening the economy are inquisitive of spanning the business across various horizons and penetrating into global countries have found a way through this Industry4.0. The complete production, manufacturing and distribution of the products and services with the streamlining of the digitisation.

**Key Words:** Industry 4.0, Errors, Delays, Engineering, Digitisation, Economy, Era.
