ABSTRACT: With the emergence of the digital era, administrative systems depend heavily on ICT-based automation. Gradually, apathy and neglect of the administrative authorities towards data security violations also have come to be in vogue in the academics. This has even led to openly develop and openly used twin cybercriminal organizations (FGoT and JNTUJAC) in the higher educational institution viz.JNTUH. Our research work highlights the maladaptive management of an educational institution, JNTUH, wherein massively organized, multiple cybercrimes at university level have prevailed through the cybercriminal website <http://jntuhjac.com> during 2011-2014.

In continuation, our research work used data by means of the RTI Act 2005 applications to disseminate to the authorities intelligence information against the cybercrime organizations JNTUJAC and FGOT which were prevalent in the JNTUH academic environment. The cybercriminal impact is that the academic spirit got affected badly leading to the abuse of the national spirit, national consciousness, national unity and integrity among the engineering students and other communities in the academic environment.

We submitted input data sheets to the RTI authorities viz. PIOs of various government organizations (for e.g. Lok Sabha Secretariat, Principal Secretary to MHRD, AICTE, CSIR, APPSC, Telangana Secretariat, Principal Secretary to the President of India) hinting/indicating/signalling about the unchecked, twin cybercriminal organizations in the JNTUH academic environment. We collected output data sheets of response, to our RTI applications, from various state and central government of the cybercrime in the JNTUH. In view of noncompliance to RTI Act 2005 of some responses, we first-appealed to the Telangana Secretariat and Ministry of Home Affairs, New Delhi.

Our analysis of the responses of the government organizations for remedial approaches to defuse the cybercriminally India-abusive/constitution-abusive organizations is on the anvil. In

this paper, we present the results of our pilot study and ongoing work to bring awareness to the general masses about the cybercriminal organizations in the educated elite institutions such that a swachch digital Indian society can be realized by broad-based efforts to arrest the cybercriminal organizations and to recover the national losses and deleterious effects of the twin cybercriminal organizations. We conclude that the twin cybercriminal organizations abused the Telangana common masses covertly during the Telangana movement later phase by misleading the engineering academics and creating artificially anarchical means to advance the movement.
