OBJECTIVE

Heat transfer and fluid flow problems are encountered in various domains, including heat exchangers, electric and microelectronics cooling, automotive and aerospace, air conditioning, fuel cells cooling, building engineering as well as conversion of renewable energy.

The objective of this conference is to bring together researchers in a forum to exchange innovative ideas, methods and results, and visions of the future related to the general theme of computational methods in heat and mass transfer. This conference will focus on the presentation and discussion of analytical, numerical and experimental methods used in the study of heat transfer and fluid flow problems.

TOPICS OF INTEREST

A wide range of topics related to classical and emerging areas of computational methods in heat and mass transfer and fluid flow for both steady and transient states will be welcome. Topics include but are not limited to

- **Finite element, Finite difference, Finite volume and Spectral methods**
- **Fluid Mechanics, Heat Transfer and Thermodynamics**
- **Multiphase and Non-Newtonian fluid flows**
- **Micropolar, Couple stress and Nanofluid flows**
- **Biofluid Mechanics**
- **Turbulent and Complex flows**
- **Numerical methods in fluid flow and heat transfer**
- **Transport phenomena in porous media**
